## CARE INSTRUCTIONS & INFO

-When we are finished installing your countertop we seal your top for you. You'll want to leave the natural stone alone for a couple of hours. Then you'll do a hot wet rag washdown of the entire stone. Repeat this step at least twice. If you notice a foggy haze on the surface that means there is still sealer than needs to be rinsed off.

-Now you can start with your daily maintenance. Use anti-bacterial mild dishsoap and water. The easiest way is to make your own cleaning solution. Squirt soap into a spray bottle and fill with water. Use the scrubby side of the sponge to remove dirt then rinse with water when done.

-To get that quarry given shine to stay DO NOT USE ANY ABRASIVES,CLOROX, FANTASTIK,ETC. These products take the quarry given finish off of the stone and overtime will dull it.

- If you have any soap build-up you'll want to get water and rinse the natural stone off then take a squeegee and remove excess water from granite.

-You'll want to seal your natural stone every 6-12 months. We offer a care kit for \$30.00. It is a Bellinzoni 3 Piece kit that includes a sealer/cleaner/polish.
